INDEX TO BEDROCK GEOLOGICAL MAPPING
1983

Canadian Cataloguing in Publication Data

Main entry under title:
Index to bedrock geological mapping, British Columbia

On cover: Index to bedrock geological mapping, 1983.
To be used in conjunction with: Assessment report index.
ISBN 0-7719-9295-5

1. Geology - British Columbia - Maps - Indexes. I. British Columbia. Ministry of Energy, Mines and Petroleum Resources. II. Title: Assessment report index.

Z6034.C19I52 1983 016.912'155711 C83-092241-5

INDEX TO BEDROCK GEOLOGICAL MAPPING, BRITISH COLUMBIA

INCLUDING PUBLICATIONS OF THE GEOLOGICAL SURVEY OF CANADA, BRITISH COLUMBIA MINISTRY OF ENERGY, MINES AND PETROLEUM RESOURCES, AND JOURNAL ARTICLES, THESES, AND COMPANY REPORTS

JULY 1983

INTRODUCTION

This index provides a list of the geological mapping of British Columbia according to the National Topographic System location. It represents a comprehensive review of the Geological Survey of Canada and British Columbia Ministry of Energy, Mines and Petroleum Resources publications, journal articles, theses, and some other unpublished material up to 1982, with additions to 1983. An updated edition will be forthcoming.

For the purposes of this index, **geological mapping** has been defined as the map representation of bedrock geological features, exposed or inferred, over a given area. Other geological studies, such as stratigraphy for example, are beyond the scope of this index, unless of course they are accompanied by a geological map.

This index includes geological mapping derived from fieldwork and/or compilation. It does not include articles which simply reproduce some previously published geological map. Mapping of a generalized nature or of limited extent has been omitted.

This index is designed to be used in conjunction with the **Assessment Report Index.** Both indexes are computer based and together provide ready access to geological and historical information on a given piece of ground.

We gratefully acknowledge the cooperation and assistance of Government agencies, industry, and various academic institutions. We especially wish to thank Mary Akehurst of the Geological Survey of Canada library in Vancouver and Fairyal Pirani of the University of British Columbia Department of Geology library for their generous help.

We welcome any corrections or additions to this index.
